

SHAKE WELL!

**“SHAKE THE CAN
TILL YOU HEAR THE BALLS RATTLE!”**
ATOM ONE, GRAFFITI ARTIST

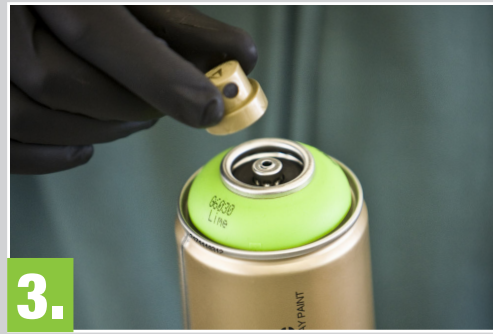

1.

Montana GOLD contains the highest quality ingredients and high pigmentation to guarantee an extraordinarily strong coverage. To use the can properly it is essential to shake well before you start to spray!

2.

To use a Montana spray can first remove the safety ring under the spray nozzle...

3.

Lift up the nozzle to get the black safety ring...

4.

The safety ring is easy to remove - just turn the spray can up side down and the ring will fall out...

5.

The ring helps to avoid accidental triggering in transport or storage...

6.

Turn the can upside down and strike the bottom of the can against the palm of your other hand.

7.

Repeat this several times to make sure to loosen up the ball bearings from the pigments in the can...

8.

Striking the can in your hand helps to loosen it up...

9.

Once the ball bearings are loose, keeping the can turned upside down to take advantage of gravity, prepare to shake...

10.

Shake the can vigorously back and forth so that you hear the multiple ball bearings rattling inside...

11.

Then shake the can vertically for at least 2 minutes...

12.

Put the nozzle back on the can...

13.

Fix the nozzle carefully with your finger and make sure that it fits.

14.

Make sure to always do the first spray on a test surface first, as the top of the valve system may harbor more solvent than pigment on the first shot. This is normal. Now enjoy spray painting with Montana GOLD!

For optimal lifespan, always make sure to store with the nozzle on the can.
