#### Respiratory protection

Not required.

#### Hand protection

The glove material has to be impervious and durable to the product/the substance/preparation. Due to lack of testing there can be given no recommendation to the glove material. The selection of the glove material has to occur on consideration of the breakthrough times, permeation and degradation.

Glove material: The selection of appropriate gloves does not only depend on the material but also on other quality attributes that are different between the manufactures. Cause the product is a preparation of several substances, the resistance of glove material is not calculable and has to be tested before use.

The exact breakthrough time has to be found out by the manufacturer of the protective gloves and has to be observed.

#### Eye protection

Goggles recommended while decanting.
