

Bieffe Flat Files - How to remove and replace drawers

IMPORTANT NOTICE :

Our Bieffe flat files cabinets are double checked at our factory for quality control and the drawers are sometimes technically adjusted for optimal use, therefore it is very important to replace them at their initial position if removed and not randomly.

Drawers removal and replacement must be smooth and it is highly important not to insist if the removal seems difficult, otherwise it could damage the drawer mechanism

Step 1

Pull the drawer to its standard extraction

Step 2

Gently lift the drawer from the sides in order to pull it above the drawer wheels.

When doing this operation, keep your hands below the drawer to support it.

Step 3

Shift the front of the drawer down in order to remove it safely.

To replace the drawers, please perform the inverse operation above.
